10. Other:						

Continuation of 5. does NOT place the application in condition for allowance because: Applicant's arguments that the master cylinder of Ocvirk does not constitute a part of a flow-rate changing device are not persuasive. Examiner notes that Ocvirk shows in figure 1 a flow-rate changing device 36,39,1,16. Examiner further notes that during brake slip controlled braking operations the pump 34 is actuated wit full capacity resulting in element 39 being driven. Also element 36 is enabled to cause pressure build up on the pump outlet side. The pressure build-up propagates to the master cylinder 1 via the supply tank 12. Also during the such braking operations element 16 is driven by a brake slip control device ultimately resulting in the changing of the flow rate of pressurized fluid (period pressure build-ups and presure decreases) from the master cylinder to the brake cylinder. Examiner maintains that as broadly claimed, Ocvirk shows a flow rate changing device which changes a rate of flow of pressurized fluid from the master cylinder into the brake cylinder with the flow rate changing device including the master cylinder.
